

Professional Growing

Down to Earth

MeMon

**The natural basis for
future-proof growth**

MeMon produces organic fertilizers and soil improvers that work with nature, and for our planet. Made from valuable residual streams. Circular, reliable, and proven effective in practice. We help farmers and growers worldwide achieve healthy soils, strong crops, and future proof growth. Pragmatic, committed, and no-nonsense. That is MeMon, Down to Earth.

MeMon Strengthens soil, crop, and business alike

Organic strength

Our organic fertilizers are developed to give farmers and growers what they need: lasting improvement of their cultivation. They nourish soil life, improve soil structure, and optimise nutrient efficiency. This means robust roots, steady growth, and consistent yields.

Natural defence

Using products developed in-house, enriched with biostimulants – such as micro-organisms – we strengthen the natural defence system of plants. They stimulate root development, improve nutrient uptake, and give growers greater control in stress situations.

Resilient and weather resistant

Growers are increasingly facing more extreme weather conditions. As a result, resilient cultivation systems are more important than ever. Our organic formulations increase water holding capacity and stabilise soil structure. This allows crops to perform better during drought, heavy rainfall, or shifting seasons.

Circular and future proof

MeMon turns residual streams back into value. By closing cycles and reducing fossil inputs, our approach contributes to a lower CO₂ footprint and more efficient cultivation systems. Distributors thus offer a portfolio that meets the sustainable demands of growers and the market alike.

Partners in growth

We invest in building strong relationships: with distributors, growers, and advisers. MeMon offers reliable quality, product innovations, practical results, and direct support – strengthening not only cultivation but also the market position of our partners. Committed, practical, and always Down to Earth.

For Soil Health & Fertility

ORGEVIT®

ORGEVIT® organic fertilizers are designed to restore soil fertility and improve soil structure through natural, sustainable, and circular ingredients. Rich in organic matter and bioactive compounds, they stimulate microbial activity, enhance nutrient cycling, and strengthen soil vitality over time. For over 25 years, ORGEVIT® has been trusted by farmers as a powerful base fertilizer that combines soil enrichment with balanced, slow-release nutrition for reliable and sustainable crop performance.

ORGEVIT® – essential for soil regeneration, sustainable growth, and long-term fertility.

ORGEVIT

Purpose

Improves soil structure and fertility, and long-term productivity

Key Benefits

- Balanced organic fertilizer; NPK ratio of 4-3-2.5 (PFC1(A)(I))
- Contains around 65% organic matter with a C/N ratio of 9
- Contains humic and fulvic acids for enhanced nutrient uptake
- Improves soil texture and long-term fertility
- Enhances the soil's nutrient and water retention capacity
- Promotes natural humus formation and overall soil vitality

Use

Ideal as a base fertilizer for enriching the soil prior to planting or during crop rotation periods.

ORGEVIT RootActive

Purpose

Strengthens root systems and promotes early crop establishment

Key Benefits

- Enhanced organic fertilizer; NPK 4-3-2.5
- Contains around 65% organic matter with a C/N ratio of 9
- Enriched with a natural component that supports root development
- Contains humic and fulvic acids for enhanced nutrient uptake
- Stimulates rapid and uniform root development
- Improves early nutrient uptake and supports strong crop establishment
- Enhances plant vigor and resilience to abiotic stress

Use

Apply during planting or early vegetative stages to strengthen root systems and support vigorous crop establishment.

ORGEVIT BioBoost

Purpose

Stimulates soil life and enhances nutrient availability

Key Benefits

- Enhanced organic fertilizer; NPK 4-3-2.5
- Contains around 65% organic matter with a C/N ratio of 9
- Enriched with a natural component that supports active soil biology
- Contains humic and fulvic acids for enhanced nutrient uptake
- Activates soil biology and supports organic matter transformation
- Improves nutrient cycling and availability within the root zone
- Increases soil vitality and biological activity
- Enhances long-term soil structure and resilience

Use

Apply throughout the growing season to maintain soil activity and fertility. Suitable for regenerative farming system.

For Soil Health & Fertility

TERRAVIT®

TERRAVIT® soil improvers are designed to rebuild soil health and resilience by improving aeration, water balance, and microbial activity. They support natural soil recovery and help prepare fields for the next productive season. Enhanced with carefully selected organic ingredients, TERRAVIT® products supply stable carbon and humic substances that improve nutrient retention, moisture regulation, and biological activity.

TERRAVIT® soil improvers help soils recover from degradation, reduce nutrient losses, and increase their water-holding capacity, essential for performance under dry or compacted conditions.

TERRAVIT® – essential for maintaining soil vitality, optimizing moisture management, and strengthening crop resilience.

TERRAVIT

Purpose

Improves soil structure and fertility supporting long term soil productivity

Key Benefits

- Soil Improver; NPK 2.5-2-2.5+0.6 MgO+5CaO
- Contains around 70% organic matter with a C/N ratio of 14
- Stimulates microbial activity, improving soil vitality and plant resilience
- Improves soil aeration, texture, and water-holding capacity
- Promotes stable humus formation and balanced soil activity
- Builds long-term soil fertility and stability for sustainable farming systems

Use

Apply after harvest or before planting to restore soil structure and optimize moisture availability.

TERRAVIT DroughtGuard

Purpose

Enhances soil water management and supports crop resilience under stress

Key Benefits

- Soil Improver; NPK 2-1.5-2+1MgO+10CaO+5Si (PFC3B)
- Contains around 55% organic matter with a C/N ratio of 12
- Enriched with carbon-rich components that boost moisture retention and long-term soil stability
- Stimulates microbial activity to improve soil and plant resilience
- Retains moisture in sandy soils and improves water infiltration in compacted soils
- Enhances soil structure and aeration for improved drought tolerance
- Reduces salt stress in saline or high-EC soils, supporting stronger root development

Use

Apply after harvest or before planting to restore soil structure and optimize moisture availability.

TERRAVIT NutriGuard

Purpose

Rebuild soil fertility while improving nutrient-use efficiency and reducing nutrient losses

Key Benefits

- Soil improver; NPK 2.5-1.5-2 + 1 MgO + 10 CaO (PFC 3B)
- Contains around 60% organic matter with a C/N ratio of 12
- Enriched with natural humic substances that increase CEC and improve nutrient retention
- Rebuilds soil fertility by replenishing essential nutrients and organic matter
- Improves nutrient-use efficiency and helps reduce nutrient losses through leaching
- Ideal for acidic soils, supporting pH balancing and improving nutrient availability
- Stimulates microbial activity, strengthening soil vitality and crop resilience

Use

Apply post-harvest or before planting to restore soil fertility, support nutrient availability, and prepare the soil for the next productive cycle.

For Crop Nutrition & Growth

SIFORGA®

SIFORGA® is a premium range of granular enriched organic fertilizers designed to strengthen soil fertility and improve soil structure. Made from natural, circular ingredients, they increase organic matter, boost microbial activity, and provide fully organic, well-balanced nutrition for crops. With their efficient granular form, SIFORGA® products ensure easy application and precise distribution, making them ideal for large-scale agricultural operations and in-row fertilization.

SIFORGA® – essential for healthy soils, optimal crop growth, and sustainable agriculture.

SIFORGA Start

Purpose

Supports early growth and enhances vegetative development

Key Benefits

- Enriched organic fertilizer; NPK 8-5-3 + 8 CaO (PFC1(A)(I))
- Contains around 65% organic matter from animal and vegetal sources
- Organic nitrogen supports efficient early growth and uniform plant emergence
- Improves soil fertility by enhancing soil structure, aeration, and water retention
- Granular form ensures uniform application and is ideal for in-row fertilization
- Suitable for use on its own or as part of organo-mineral blends targeting early growth and establishment

Use

Apply at planting or during early vegetative stages to support strong early development and prepare crops for vigorous growth.

SIFORGA Fruit

Purpose

Supports fruit set and healthy, balanced fruit development

Key Benefits

- Enriched organic fertilizer; NPK 4-3-8 + 1 MgO + 8 CaO (PFC1(A)(I))
- Contains around 60% organic matter from animal and vegetal sources
- Provides a steady nutrient release for consistent fruit formation and development
- Improves soil fertility by enhancing structure, aeration, and nutrient availability
- Granular form ensures uniform application and is ideal for in-row fertilization
- Suitable for use on its own or as part of organo-mineral blends targeting fruit set and development

Use

Apply at the start of the fruiting stage or according to crop-specific nutrition programs.

For Crop Nutrition & Growth

PRIMAX®

PRIMAX® high-performance organo-mineral fertilizers are formulated to meet the demands of today's agriculture. By combining mineral efficiency with the long-term benefits of organic matter, they improve nutrient-use efficiency, reduce nutrient leaching, and support healthy growth across all crop stages. With their well-balanced nutrient profile and sustainable formulation, PRIMAX® fertilizers strengthen soil health and optimize crop nutrition while enhancing yield potential.

PRIMAX® – essential for efficient nutrition, strong crop performance, and sustainable productivity.

PRIMAX

Purpose

Improves nutrient-use efficiency, soil health, and crop yield

Key Benefits

- Optimizes crop nutrition with tailored solutions for specific growth stages and crop requirements
- Improves nutrient efficiency and reduces nutrient leaching, supporting sustainable crop growth
- Stimulates soil microbial activity, enhancing soil structure and long-term fertility
- Compatible with customized fertilization programs; ideal for diverse crops and farming systems
- Available in all-in-one pellets (4-5 mm) and granular blends (2-5 mm)
- All-in-one pellets ensure consistent nutrient release and uniform distribution, enabling easy application in large-scale farming
- Granular blends provide flexibility with a balanced mix of organic matter and mineral nutrients, ideal for crops requiring higher mineral nutrition

Use

Apply PRIMAX according to crop-specific needs and growth stages.

All-in-one formulations

Combine organic matter and minerals in a single pellet for balanced and uniform nutrient delivery

PRIMAX Start 9-3-3

- Provides balanced organic and mineral nitrogen for a uniform crop start
- High sulfur content to enhance nitrogen uptake for vigorous early growth
- Improves nutrient efficiency and stimulates soil biology during early growth stages

PRIMAX Grow 12-4-6

- Promotes strong vegetative growth and canopy formation
- Provides balanced NPK for consistent crop development
- Improves nutrient efficiency for healthy and uniform plants

PRIMAX Root 7-14-1

- Stimulates root development and early crop establishment
- Rich in phosphorus for strong rooting and initial vigor
- Improves nutrient uptake and early resilience

PRIMAX Fruit 4-6-12

- Supports fruit setting and filling with high potassium content
- Enhances fruit quality, color, and taste
- Strengthens plant vitality during reproductive stages

Blended Formulations

Contain organic and mineral granules, providing flexibility in nutrient ratios for specific crop needs

PRIMAX NutriGrow 16-4-10

- Delivers concentrated nutrition for rapid crop response
- Ideal for intensive systems requiring higher nutrient supply
- Unique granular shape to ensure homogeneous spreading

PRIMAX Bloom 7-10-15

- Formulated to enhance flowering and fruit set
- Provide balanced nutrients to sustain bloom quality and fruit development
- Unique Granular shape to ensure a homogeneous spreading

PRIMAX Balance 12-12-12

- Provides balanced nutrition for all crop stages
- Ensures uniform growth and nutrient availability
- Unique granular shape to ensure homogeneous spreading

For Soil Health & Fertility

MONTERRA[®]

Soil-Line

MONTERRA[®] Soil-Line is a premium range of organic soil improvers developed to restore, protect, and revitalize soils in organic and regenerative farming systems. By enhancing soil structure, stimulating microbial activity, and improving water and nutrient balance, MONTERRA[®] Soil-Line products promote long-term soil regeneration and sustainable crop performance. They offer natural, effective solutions to rebuild fertile soils, increase resilience to stress, and strengthen biological vitality—the foundation of thriving organic agriculture.

MONTERRA[®] Soil-Line – essential for healthy soils, optimal crop growth, and sustainable agriculture.

MONTERRA Rebuilder

Purpose

Restores soil fertility and structure for lasting productivity

Key Benefits

- Balanced organic fertilizer; NPK ratio of 3.8-3-2.4 + 8CaO (PFC1(A)(I))
- Certified for use in organic farming (EU Regulations 2021/1165 and 2018/848)
- Contains approximately 65% organic matter with a C/N ratio of 10
- Improves soil structure and fertility through natural, organic processes
- Enhances nutrient and moisture retention, supporting balanced soil ecology
- Promotes natural humus formation and stimulates biological soil activity
- Contains humic and fulvic acids for improved nutrient uptake and soil regeneration
- Strengthens long-term soil health and ensures sustainable productivity in organic systems

Use

Ideal as a base fertilizer for enriching soil in organic farming. Apply before planting or during crop rotation to optimize soil fertility and support sustainable growth.

MONTERRA Guard

Purpose

Builds soil and crop resilience against environmental stress

Key Benefits

- Organic Soil improver; NPK 3-1-3 + 0.8CaO (PFC1(A)(I))
- Certified for use in organic farming (EU Regulations 2021/1165 and 2018/848)
- Made from 100% vegetal raw materials with a C/N ratio of 14
- Improves soil structure and enhances organic matter stability
- Increases water-holding capacity, maintaining moisture availability in dry conditions
- Stimulates microbial activity to improve nutrient availability and soil vitality
- Boosts root development for more efficient water and nutrient uptake
- Improves soil resilience to drought and temperature fluctuations

Use

Apply post-harvest or before planting to restore soil balance and improve water retention capacity.

MONTERRA Activator

Purpose

Stimulates soil biology and enhances natural fertility

Key Benefits

- Organic Soil improver; NPK 3.5-2.5-2 + 2.5 CaO (PFC1(A)(I))
- Certified for use in organic farming (EU Regulations 2021/1165 and 2018/848)
- Insect-based circular product with a low carbon footprint
- Natural source of chitin, stimulating beneficial soil microbes
- Activates soil biology and enhances nutrient cycling for improved soil vitality
- Balanced C/N ratio of 13 supports stable organic matter transformation
- Improves soil structure and increases water-holding capacity of the soil
- Boosts root-zone activity for stronger and healthier plant growth

Use

Apply post-harvest or before planting to activate soil biological processes and improve nutrient availability.

Crop Nutrition & Growth

MONTERRA[®] Nutri-Line

MONTERRA[®] Nutri-Line is a premium range of organic nutrient pellets designed for use in certified organic farming systems. Made from high-quality natural raw materials, these products combine concentrated organic nutrition with the ability to enrich soil structure. With a focus on efficiency, consistency, and soil health, MONTERRA[®] Nutri-Line delivers sustainable crop nutrition that aligns with the principles of regenerative and organic agriculture.

MONTERRA[®] Nutri-Line – essential for efficient nutrition, strong crop performance, and sustainable productivity.

MONTERRA Nutri-Line

Purpose

Provides efficient organic nutrition and enhances soil vitality

Key Benefits

- Premium organic pellets made from carefully selected natural raw materials
- Certified for use in organic farming (EU Regulations 2021/1165 and 2018/848)
- Tailored formulations to meet the specific nutritional needs of different crops growth stages
- High organic-nitrogen formulations to meet crop N requirements in organic farming
- Enhances soil structure, improving nutrient and water-holding capacity
- Improves soil fertility while providing balanced organic nutrients for steady crop development
- Stimulates microbial activity and promotes long-term soil productivity in sustainable agriculture
- Malt germ enriched formulations further promote beneficial soil microbes and enhance biological soil functioning

Use

Apply at planting or during key crop growth stages, according to the crop's nutrient requirements.

MONTERRA Start 9-7-1

- High organic nitrogen and phosphate content to support vigorous early growth and establishment
- Combines quick- and slow-release organic nitrogen for both immediate and sustained nutrition
- Well-balanced NP formulation to promote uniform crop development and early vigor

MONTERRA Boost 9-1-4

- Enriched with malt germs to stimulate soil biology and sustain crop vitality
- Enhances root growth and nutrient uptake, improving nutrient efficiency and overall plant performance
- Maintains steady growth and supports mid-season performance

MONTERRA Grow 13-0-0

- High in organic nitrogen providing a powerful nitrogen source for organic crops
- Combines quick- and slow-release organic nitrogen for both immediate and sustained nutrition
- High in organic matter Improving soil vitality and nutrient-use efficiency

MONTERRA Balance 7-1-4

- 100% plant-based organic formulation, supporting soil fertility and enhancing plant resilience
- Contains 5 % sulfur to improve nitrogen efficiency and support healthy early growth
- Improves soil structure and promotes biological activity

MONTERRA Root 4-10-2

- High organic phosphate content to promote strong root development and early crop establishment
- Contains 8% calcium to support healthy root and cell structure formation
- Slow-release phosphates ensure steady nutrient availability during early growth and in phosphate-fixing soils

For Crop Nutrition & Growth

SIFORGA® Bio-Line

SIFORGA® Bio-Line is a premium range of organically enriched granular fertilizers, certified for use in organic farming systems. Formulated from high-quality natural raw materials, these products enhance organic matter content, stimulate soil biology, and provide balanced nutrition for healthy and resilient crops. Their granular form allows for easy application and even spreading, making them ideal for maintaining soil fertility and ensuring long-term productivity in organic systems.

SIFORGA® Bio-Line – essential for efficient nutrition, strong crop performance, and sustainable productivity.

SIFORGA Grow

Purpose

Promotes early growth and vegetative development in organic systems

Key Benefits

- Enriched organic fertilizer; NPK 10-1-3 + 2 CaO (PFC1(A)(I))
- Certified for use in organic farming (EU Regulations 2021/1165 and 2018/848)
- Contains around 80% organic matter from animal and vegetal sources
- High organic nitrogen content supports vigorous early growth and uniform plant establishment
- Improves soil fertility by enhancing structure, aeration, and water-holding capacity
- Granular form ensures uniform application, ideal for in-row fertilization

Use

Apply at planting or during early vegetative stages to support strong early development and prepare crops for vigorous growth.

SIFORGA Fruit

Purpose

Supports fruit setting and early fruit development for improved quality and yield

Key Benefits

- Enriched organic fertilizer; NPK 4-3-8 + 7 CaO (PFC1(B)(I))
- Certified for use in organic farming (EU Regulations 2021/1165 and 2018/848)
- Contains around 60% organic matter from animal and vegetal sources
- Balanced organic formulation rich in potassium to support fruit development, firmness, and taste
- Moderate nitrogen ensures steady growth without excessive vegetative activity
- Improves soil fertility and promotes biological activity for sustainable productivity
- Granular form ensures uniform application, ideal for in-row fertilization

Use

Apply from fruit set to early ripening to promote quality, color, and yield.

SIFORGA Boost

Purpose

Supports fruit ripening and enhances soil and crop vitality during the final growth stages

Key Benefits

- Enriched organic fertilizer; NPK 4-1-8+ 1CaO (PFC1(A)(I))
- Certified for use in organic farming (EU Regulations 2021/1165 and 2018/848)
- Contains around 75% organic matter from vegetal sources
- High potassium content promotes fruit ripening, color, and quality
- Stimulates soil biology and maintains crop vitality in late-season stages
- Granular form ensures uniform application, ideal for in-row fertilization

Use

Apply during fruit ripening to enhance fruit quality and maintain soil activity.

For Crop Nutrition & Growth

FONTANA®

FONTANA® is a range of highly concentrated organic liquid fertilizers designed for precise, efficient crop nutrition throughout every growth stage. Made from 100% natural raw materials, the formulations deliver nutrients in a readily available form, ensuring rapid plant response and sustained performance. Their liquid composition allows easy integration into fertigation and foliar programs, improving nutrient efficiency and uniform crop growth. FONTANA® fertilizers combine the power of organic nutrients with biological activation, helping growers enhance plant vitality, strengthen resilience, and maintain long-term soil health.

FONTANA® - essential for precise nutrition, strong crop performance, and sustainable productivity.

FONTANA

Purpose

Delivers efficient organic crop nutrition while supporting plant vitality and soil biological activity

Key Benefits

- Produced from 100% organic raw materials, including fermented plant extracts and enzymatically hydrolyzed animal proteins
- Certified for use in organic farming (EU 2018/848 & 2021/1165 – non-edible crop parts)
- Produced in compliance with EU Regulation 2019/1009, conformity assessment Module A
- Provides a balanced release of nitrogen for both rapid crop response and sustained nutrition
- Rich in short-chain amino acids so support energy-efficient nitrogen uptake via leaves and roots
- High organic matter content stimulates crop growth and enhances biological soil activity
- Growth-promoting compounds stimulate enzyme activity and overall plant metabolism
- Natural wetting and adhesive effect improves foliar coverage and nutrient absorption
- Low-pH formulation ensures excellent compatibility and effectiveness in foliar applications

Use

Apply via fertigation, drip irrigation, or foliar spray according to crop stage and nutrient demand.

Regular range

FONTANA Grow 7.5-0-0

- Highly concentrated organic nitrogen fertilizer for vigorous vegetative growth
- Quick-release nitrogen ensures fast plant response and canopy development
- Contains high amount of organic matter and amino acids to stimulate soil biology and nutrient efficiency

FONTANA Fruit 2-0-10

- Plant-based liquid fertilizer fully water-soluble and easy to apply
- Concentrated potassium source that promotes fruit ripening, color, and post-harvest quality
- Can be applied at high concentration, ensuring efficient nutrient delivery and quick plant response

FONTANA Boost 4-1-6

- Stimulates root development and early crop establishment
- Rich in phosphorus for strong rooting and initial vigor
- Contains high amount of organic matter and amino acids to stimulate soil biology and nutrient efficiency

Premium range

FONTANA Start 6-2-2

- Plant-based liquid fertilizer made from enzymatically hydrolyzed vegetal raw materials, vinasse free
- Provides quick-release organic nitrogen for rapid early crop response and root establishment
- Contains organic matter and amino acids that enhance nutrient uptake and soil biological activity

- Contains organic matter and amino acids that enhance nutrient uptake and stimulate soil biological activity

FONTANA Balance 4-2-4

- Plant-based liquid fertilizer made from enzymatically hydrolyzed vegetal raw materials, vinasse-free and fully water-soluble
- Provides complete organic nutrition to maintain steady crop growth and overall vitality
- Contains organic matter and amino acids that enhance nutrient uptake and support soil biological activity

FONTANA Root 3-4-3

- Plant-based liquid fertilizer made from enzymatically hydrolyzed vegetal raw materials, vinasse-free and fully water-soluble
- High organic phosphate content promotes strong root initiation and supports early flowering

Ready for healthy growth?

As a distributor, you want to work with products that have proven themselves worldwide and with a brand that stands behind you. MeMon offers strong formulations, international experience, and support that goes beyond delivery alone. Thanks to multiple production facilities, a global network, and brands such as ORGEVIT, TERRAVIT, SIFORGA, and MONTERRA, you are assured of consistent quality and reliable availability. This is how we make the difference. For the soil, for growers, and for your business.

Let's work together!

Are you ready for healthy growth? We'd be happy to get in touch. Contact us for advice or to discuss an agency or distribution partnership.
